

disterrazzo - light

The particularly economical alternative to sealants to improve the visual appearance.

System description

- Surface treatment by full grinding. The industrial floor is dry-ground using effective, patented machines and unique diamond and polishing tools.

The result is a highly economical surface with a visible grain structure that impresses with its attractive appearance and high mechanical load-bearing capacity.

The ideal basis for **disterrazzo-light** is our **displan** industrial flooring.

disterrazzo-light is also excellent for renovating and revitalising of existing floors.

Area of application

- Wholesale markets
- Exhibition halls
- Logistics and storage halls
- Driveways
- High-bay warehouses
- Areas with public traffic

Process steps

- The first step is the surface treatment of the finished industrial floor, i.e. fine sanding with special plastic diamond pads.
- The surface treatment is carried out in 3 to 4 sanding steps in order to achieve a high-quality appearance and a high level of evenness.
- After thorough cleaning, the surface is first treated with Discare HPS and then polished after curing

Advantages

- Processing the industrial floor gives the surface a high degree of evenness. The floor becomes more wear-resistant, easy to maintain and inexpensive to clean.
- The running smoothness for industrial transport vehicles is increased - maintenance costs are reduced.
